

Your path to digital leadership

Why Red Hat should be your trusted partner

Speaker's Name

Title Goes Here

Location or date

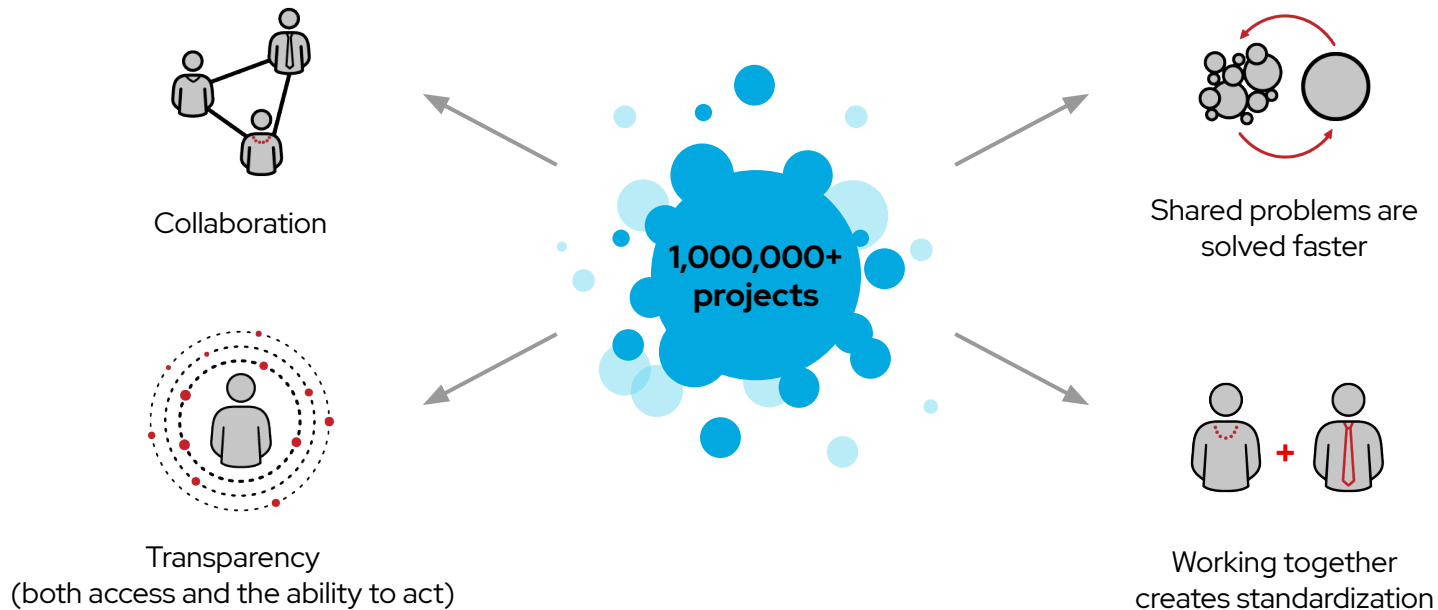

Open source

We are an enterprise software company with an open source development model.

How does this make us different?

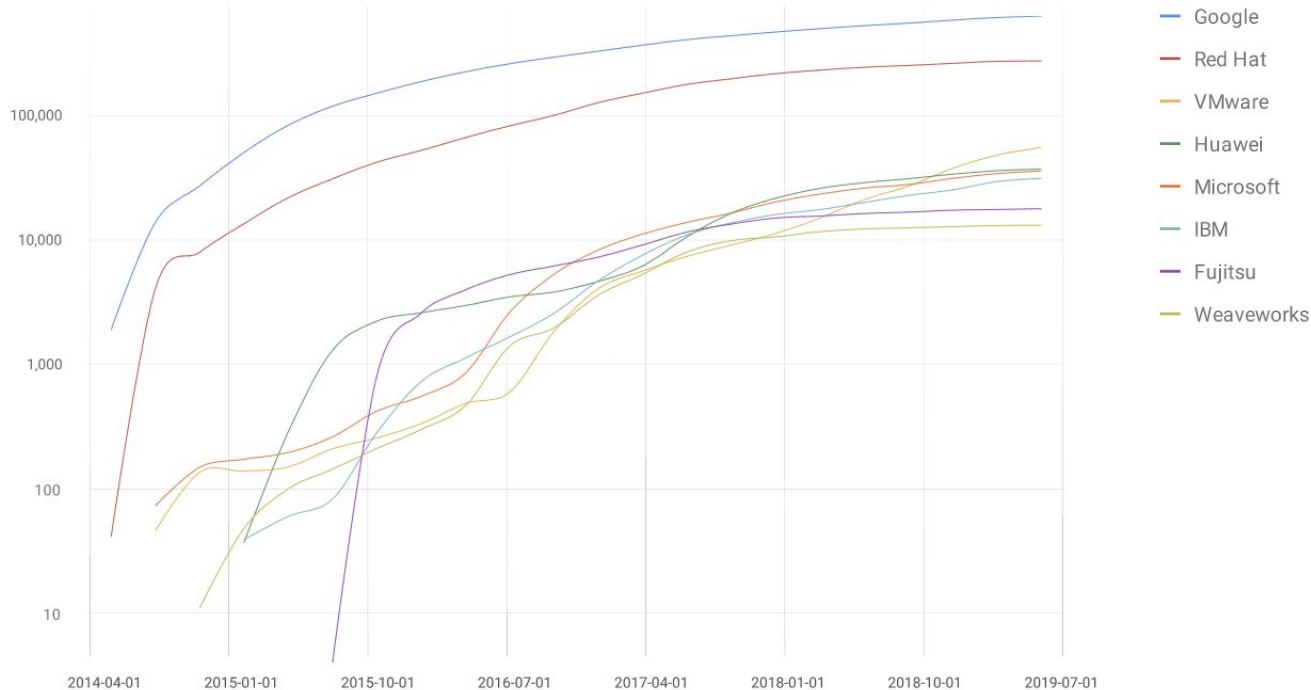

How does this benefit our customers and partners?

The open source way

Sharing stewardship & growing the community

Code diversity: no single company dominates contributions to Kubernetes

Enterprise Open source

We are an enterprise software company with an open source development model.

How does this make us different?

How does this benefit our customers and partners?

It's about more than open source

RED HAT IS AN
ENTERPRISE SOFTWARE COMPANY
WITH AN
OPEN SOURCE DEVELOPMENT MODEL

Product development model

Participate, integrate, stabilize

1

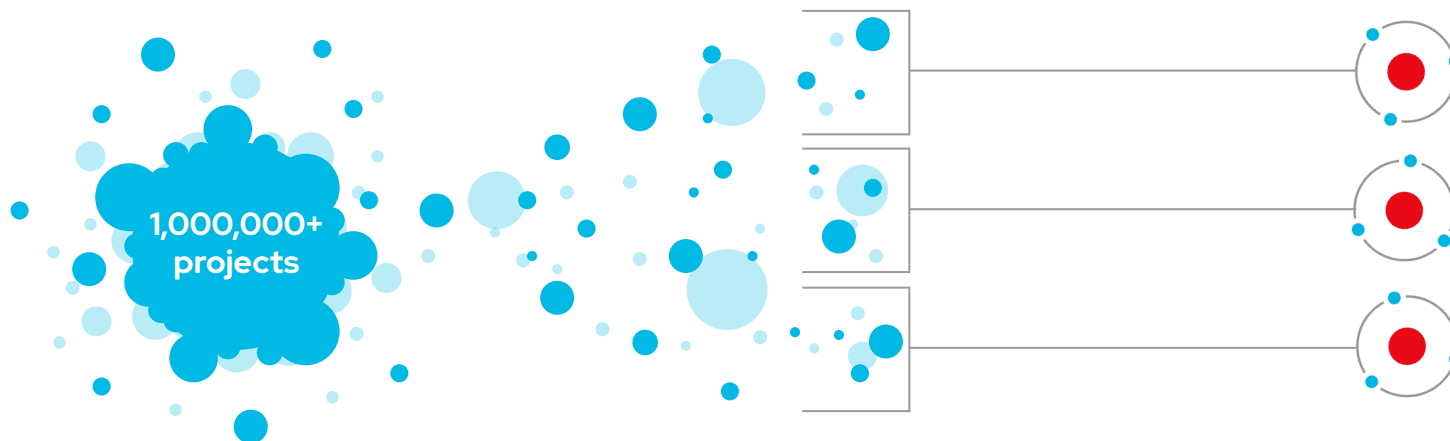

We participate in and create community-powered upstream projects.

2

We integrate upstream projects, fostering open community platforms.

3

We stabilize & commercialize these platforms, including a rich ecosystem of services & certifications.

Red Hat: Leading open source innovation

Our influence has broad industry impact

GitHub has 100M repos.

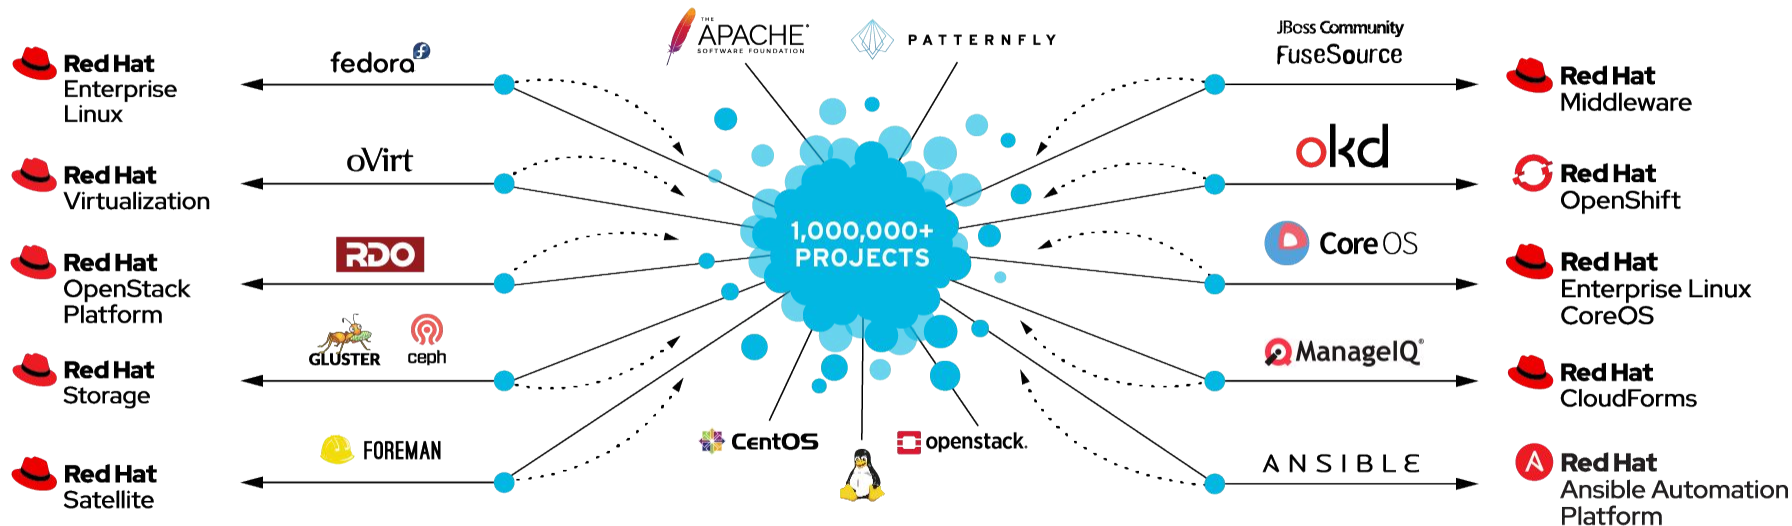

We can't deliver all its projects as products.

We focus on the technology our customers and partners need.

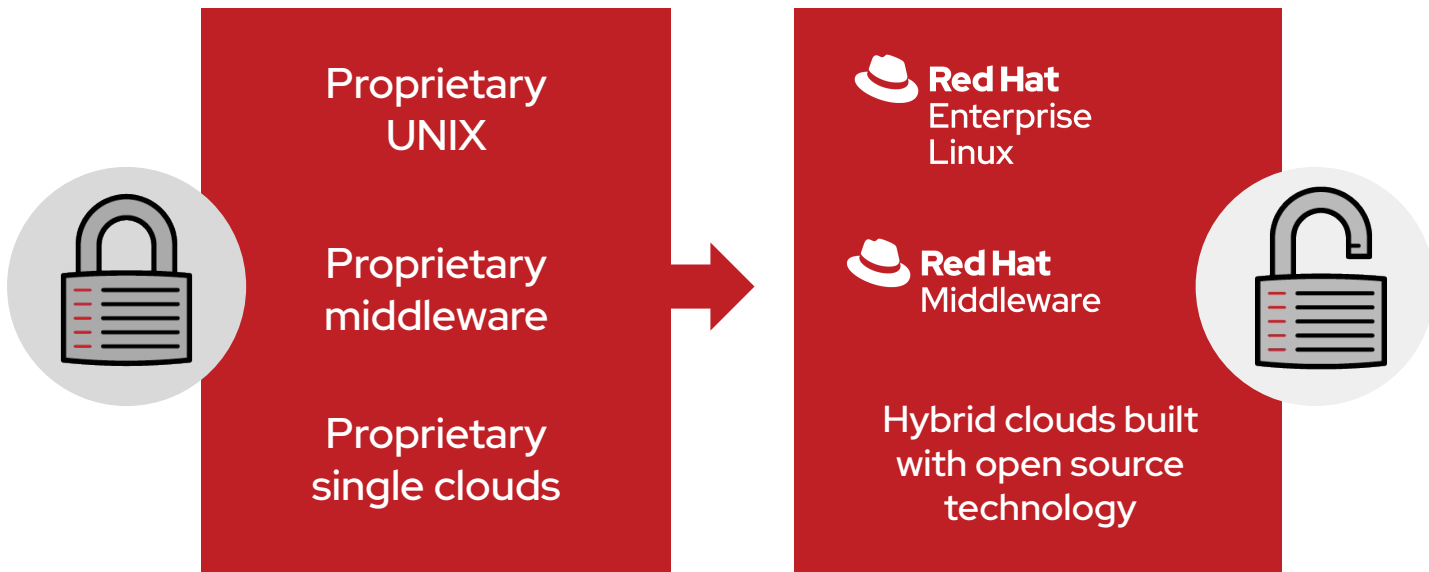

And we make improvements to build better solutions.

TOGETHER.

From community to enterprise

We've made this move to open before

Value of a subscription

What are we doing for you today?

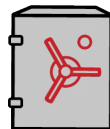

Stable technology

- Hardened & tested
- kABI/ABI
- QE/DCI

Experience

- Award-winning support
- Customer portal
- Training

Security

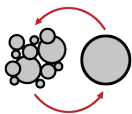

- Product Security Team
- Supply chain
- As a lifestyle

Life cycle

- Subscription model
- 10+ year support
- In-place upgrades

What are we doing for you in 5 years?

- Upstream leadership
- Advocacy for your requirements

- Hardware, software, cloud & service partners
- Security & compliance certifications

We are building the future

From Linux to
virtualization

Cloud to Kubernetes

Today's must-
have platforms
through tomorrow's
emerging tech

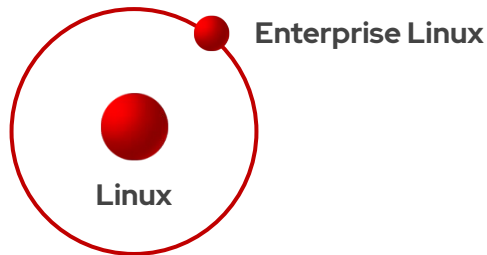

The foundation is Linux

The innovation engine for today and tomorrow

Linux

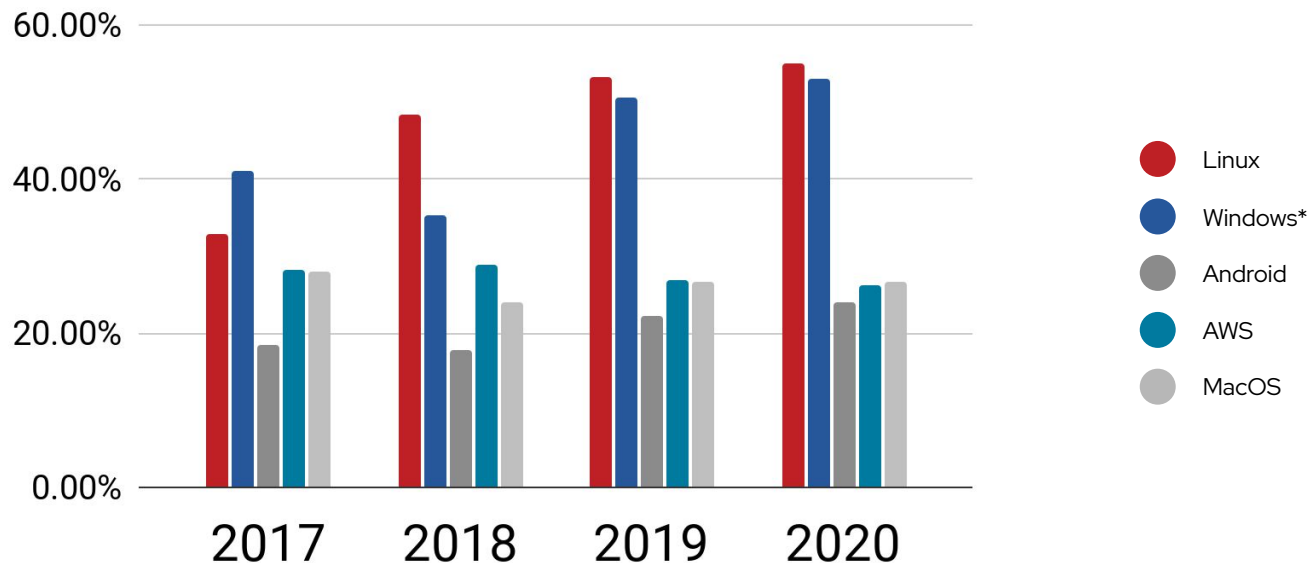

We brought Linux & open source to the enterprise

Red Hat takes Linux from a development **project** to a commercially consumable **product**

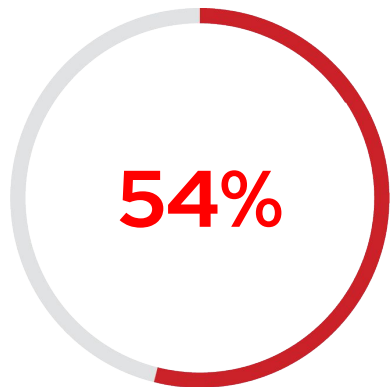

Linux is the most used platform

For development today

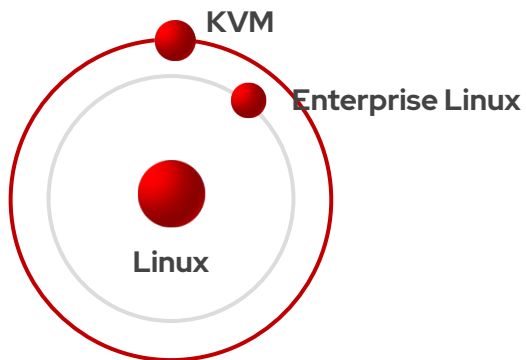

Linux is the most used platform

For virtual machines in the public cloud

of all applications running in public cloud infrastructure are running on Linux VMs.

We opened up virtualization for the enterprise

Who uses KVM?

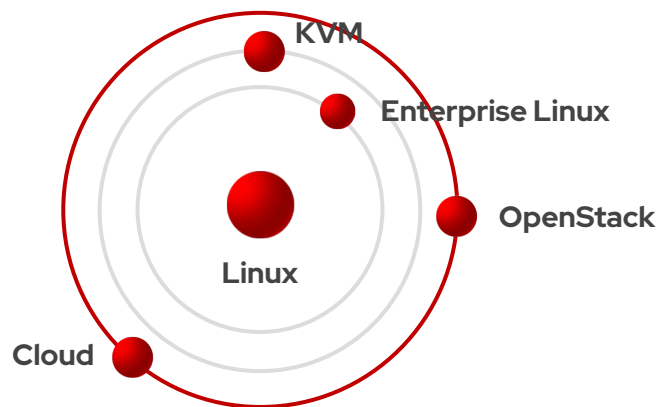

Amazon Web Services (AWS)¹

Google Cloud²

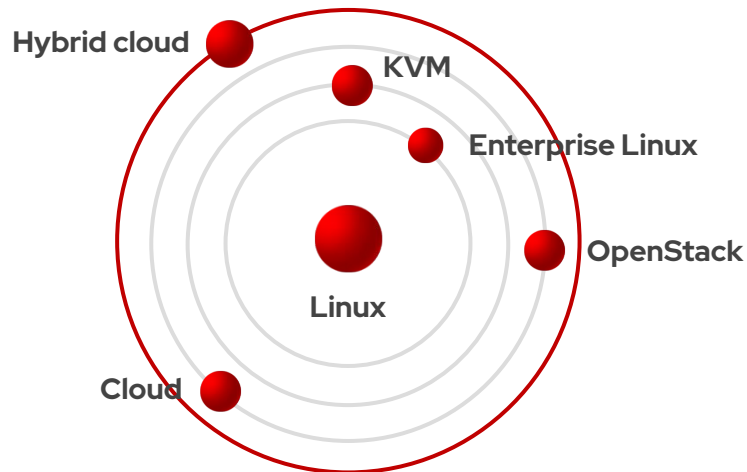

Oracle, IBM Cloud & Intel³

Multiple open source projects, including OpenStack⁴

Cloud computing exists because of Linux

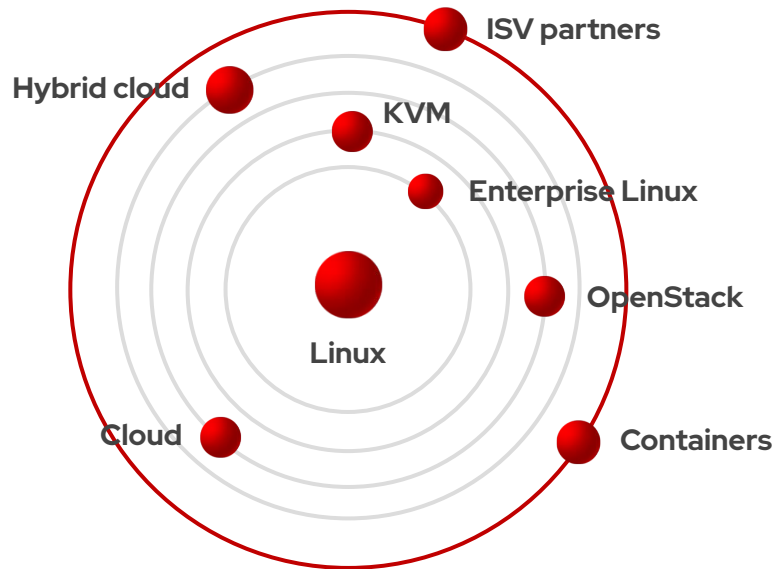

An open hybrid cloud strategy is the only practical way forward

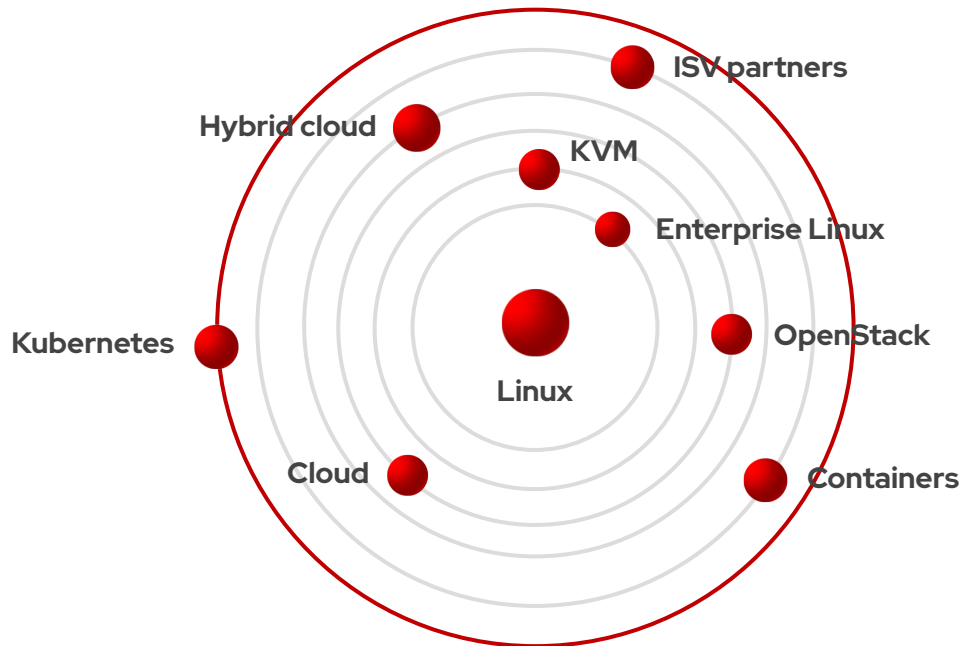

Public cloud is one piece of the commercial IT infrastructure

Containers are Linux

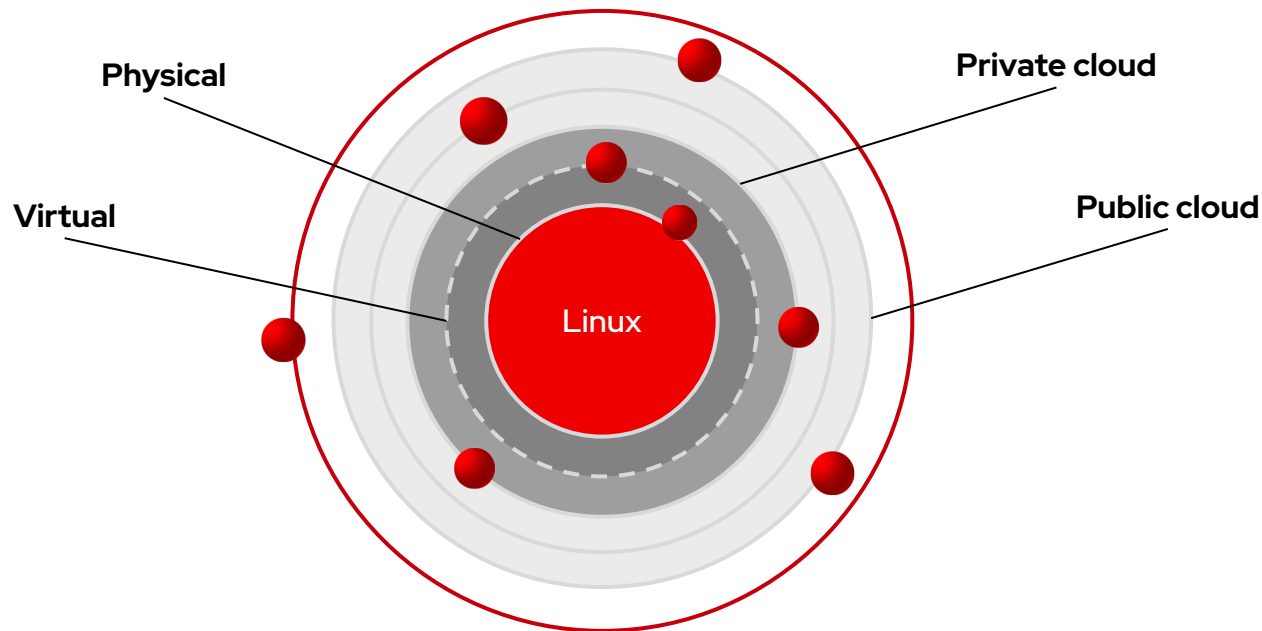

And they are the critical application for hybrid cloud computing

Kubernetes depends on the Linux container OS

Today's datacenter must be ready for hybrid

Portfolio, ecosystem, & experience

How we execute on our strategy--giving our customers, partners, and communities what their organizations need to grow and flex.

Because the world is changing around us.

Supported by our ecosystem of partners & certified providers

Hybrid cloud infrastructure

We have the Linux foundation & the cloud platforms to build flexible hybrid cloud infrastructure.

Cloud-native development

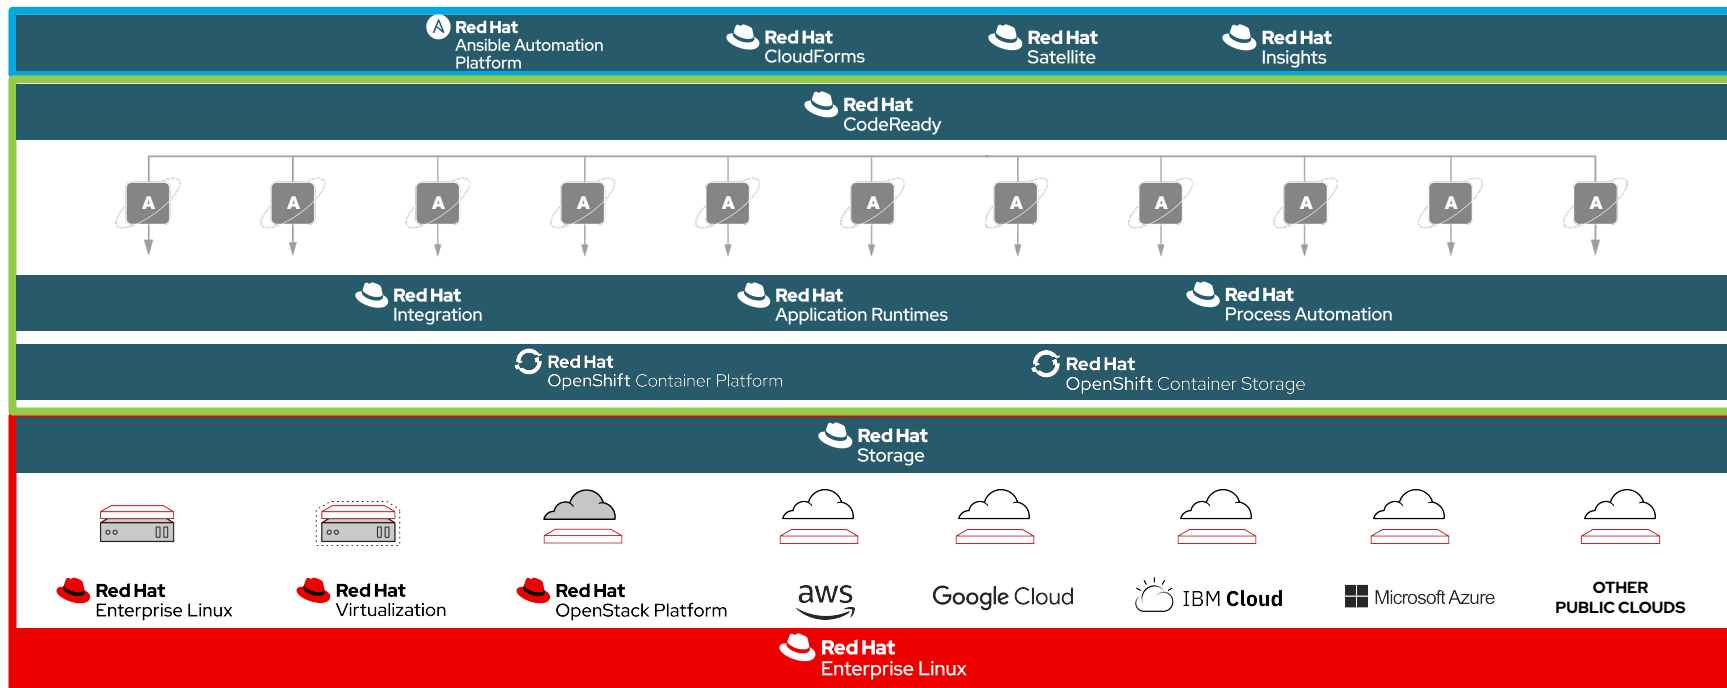

We have the enterprise Kubernetes container platform with middleware services that developers want & need.

Management & automation

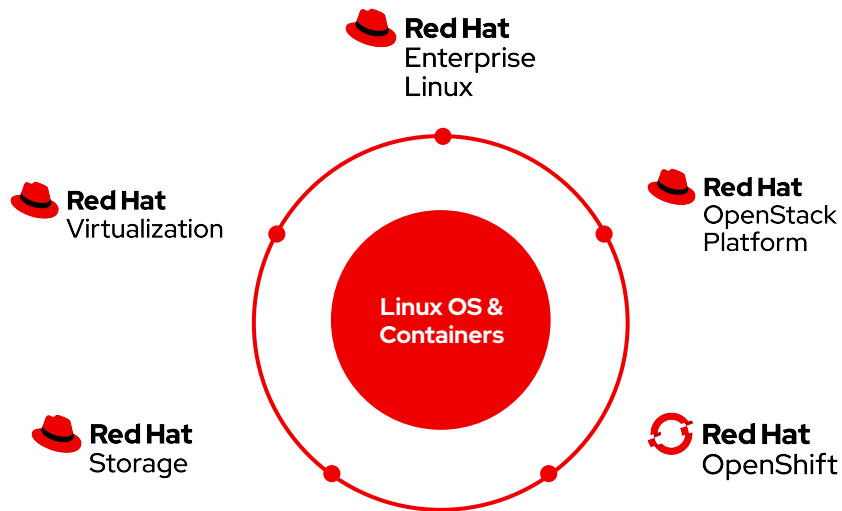

We have management & automation solutions that make our portfolio sticky & easier to use.

Everything works together

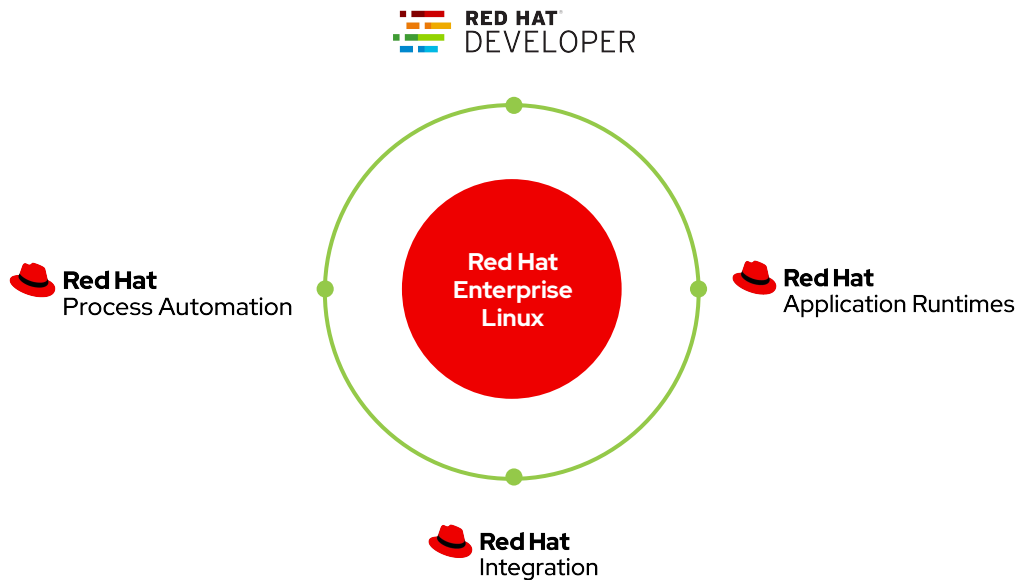

Hybrid cloud infrastructure

The foundation & platforms

- Linux is the foundation
- Build a scalable private cloud with OpenStack
- Our container platform provides on-premise support for hybrid applications
- Virtualization bridges legacy to the cloud
- Software-defined storage for containers & cloud

Development software and tools

Developer tools & program

Build, package, deploy & operate applications with automated CI/CD & DevOps experience.

Runtimes

Red Hat JBoss Enterprise Application Platform helps you move to the cloud by modernizing Java EE workloads. Use Red Hat OpenShift Application Runtimes for new development.

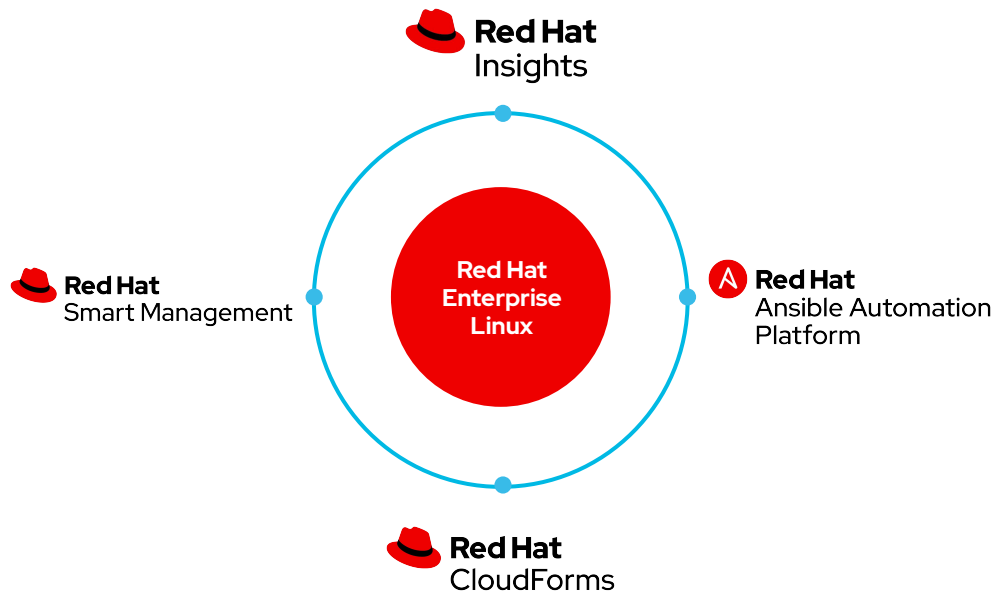

Integration

Connect APIs and services within our platforms. API management.

Process Automation

Application development for creating complex applications and workflows with less coding.

Management and software automation software

Insights

Proactively identify problems & prevent critical issues.

Ansible

Automate IT processes & centralize governance.

Satellite

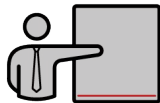

Easily maintain & update your Red Hat environment.

Cloudforms

Deliver services across hybrid cloud environments.

Comprehensive services

We can help you, no matter where you are or what you need

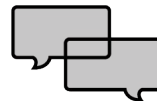

Training & certification

Hands-on training & practical certifications, from Linux to DevOps, with learning paths to help you embrace the challenges of any job

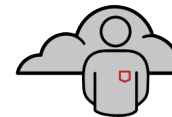

Support

Tools, planning & support are available 24x7 through our award-winning* Customer Portal

Consulting

Design through project management to align process & IT, with on-site or remote delivery

Hardware, software, & cloud certification

Certified public cloud providers, hardware platforms, apps & containers

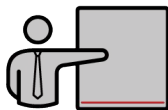

Red Hat Open Innovation Labs

Mission

Establish a preferred new way of working, a way that delivers superior digital solutions, sourced from Red Hat's open technology, open processes, and open culture.

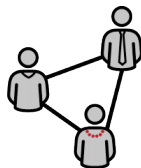

Vision

Unlock our customers' greatest possible potential, through open technology, open process, and open culture.

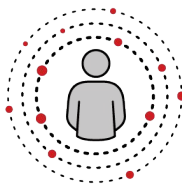

DevOps Culture and Practices Enablement (GLS DO500)

- Duration - 1 week
- Team size - Individual participation
- Customer outcome - Inspired understanding of DevOps, the Red Hat Way

Labs residency

- Duration - 2 months
- Team size - 3-6 customer residents
- Customer outcome - Transformed team, working prototype on OpenShift

Transformation at scale

- Duration - 1-3 years
- Team size - >100 people affected
- Customer outcome - Scaled adoption of Red Hat technology, and Red Hat ways of working
- Customer outcome - Delivering groundbreaking digital solutions, the Red Hat Way
